possibilities

KEIO TECHNO MALL 2016

Program of Events
Outline of Exhibits

1 Encounters with researchers and subjects of research

You can be sure of unexpected encounters and first-hand information otherwise unattainable on the internet. More than just topics related directly to your own products or business, perhaps, you will find subjects of research with prospects for new business expansion.

2 Expanded scope and greater flexibility

By learning about the actual research at exhibition booths and seminars, talking directly with the researchers and feeling actual objects, you will be able to get a real feeling for the expanse of possibilities. Also, with regard to collaboration with universities, Keio Leading-edge Laboratory of Science and Technology (KLL) will respond flexibly to requests for advice about procedures and contractual aspects.

3 Publicizing of research results

With the KEIO TECHNO-MALL being a venue for the objective and academic publication of research results, you can demonstrate the outcomes of industry-academia collaboration, and you can utilize it for business expansion.

4 Search for product / technology possibilities

Proposals for the utilization of your products and technologies in helping research are also very welcome. The KEIO TECHNO-MALL provides a platform for linking to the development of new products and technologies amid the flow of people, objects, funds and information.

Event Information

Venue Event Stage

Keynote Speech

10:40 - 11:30

Open innovation strategy for Keio University in collaboration with industry

Open innovation strategy for Keio University in collaboration with industry. To make a new breakthrough and development in science and technology, a successful collaboration among global institutes, university resources and industries is most important in research function of Keio University. As if products would be globally exchanged in a port as economy would grow, "Open Innovation Hub" will play a key role in research collaboration of Keio University.

[10:40 - 11:00] Overview

MAKABE, Toshiaki

Vice-President for Research, Keio University

[11:00 - 11:30] Case Studies

Nanolmaging Center

OKA, Kotaro

Professor, Dept. of Biosciences and Informatics, Faculty of Science and Technology

Haptics Research Center

OHNISHI, Kouhei

Professor, Dept. of System Design Engineering, Faculty of Science and Technology

Open Research Center for Development of Super Mature Society

YAMANAKA, Naoaki

Professor, Dept. of Information and Computer Science, Faculty of Science and Technology

Main Event

13:30 - 14:30

Building the New National Stadium

Architect Kengo Kuma's roots lie in the Tokyo Olympics. As a 10-year old boy at the time of the 1964 Tokyo Olympics, Kuma was taken by his father to visit the Yoyogi National Gymnasium designed by Kenzo Tange. The design would have a profound impact on Kuma, sparking his desire to become an architect. After the plot twists surrounding the New National Stadium, the team of Taisei Corporation, Azusa Sekkei, and Kengo Kuma won the revised bid, with an inviting design that is just two-thirds the height of the original Zaha Hadid design. The stadium makes extensive use of wood, and the warm design blends into the surrounding outer garden of Meiji Shrine. We will examine the philosophy and ideas of architect Kengo Kuma, which carry on to the design of the New National Stadium for the Tokyo Olympics in 2020.

KUMA, Kengo

Architect Professor, The University of Tokyo

Interviewer:

MITA, Akira

Professor, Dept. of System Design Engineering, Faculty of Science and Technology

Coordinator:
YAMANAKA, Naoaki

Professor, Dept. of Information and Computer Science, Faculty of Science and Technology

Round-table Session I

11:40 - 13:00

Human Brain Deceived by Computers – Examining Virtual Reality and Robots

As the capabilities of computers have expanded, it has been suggested that they might one day exceed the abilities of the human brain, but is that really true? The panel will discuss computer-human collaboration and the evolution of virtual reality and robots, from the perspective of deception of the human brain by computers.

MOGI, Kenichiro

Senior Researcher, Sony Computer Science Laboratories, Inc.

KIMURA, Toshitaka

Senior Research Scientist, NTT Communication Science Laboratories

MIKAMI, Dan

Research Engineer, Media Intelligence Laboratories, Nippon Telegraph and Telephone Corporation

IMAI, Michita

Professor, Dept. of Information and Computer Science, Faculty of Science and Technology

FUJISHIRO, Issei

Professor, Dept. of Information and Computer Science, Faculty of Science and Technology

Facilitator:
SAITO, Hideo

Professor, Dept. of Information and Computer Science, Faculty of Science and Technology

Round-table Session II

14:50 - 16:00

Examining Angel Activities and Science and Engineering Based Ventures Started by the Keio Leading-edge Laboratory of Science and Technology

Although technology transfer from industry to universities through collaboration and self-startups is desirable, there are known to be several difficulties with incubating ventures in Japan. This roundtable panel discusses the possibilities for university-based ventures and the issues they are facing.

SASAKI, Keishin

President & CEO, e-solutions, Inc.

NAKA, Michimasa

CEO, Boardwalk Capital, Inc.

YAMAGISHI, Kotaro

CEO, Keio Innovation Initiative, Inc.

MASHITA, Naoaki

Representative Director, President and CEO (Founder), V-cube, Inc.

SUZUKI, Ryuichi

CEO, AISSY, Inc. Executive Director, Mentor Mitakai

AWANO, Yuji

Professor, Dept. of Electronics and Electrical Engineering, Faculty of Science and Technology

Facilitator:
MORITA, Toshio

Associate Professor, Dept. of Mechanical Engineering, Faculty of Science and Technology

Seminar Information

Venue Seminar Stage

Technology Partnership Seminars

30min. each

① 11:00 - 11:30

Investigation of the mechanisms of health effect caused by PM2.5 particles

We introduce recent concept to elucidate these parameters using aerosol engineering techniques such as virtual impactor and cyclone system.

OKUDA, Tomoaki

Associate Professor,
Dept. of Applied Chemistry,
Faculty of Science and Technology

Booth
P10

② 14:50 - 15:20

Future Lifestyle Vision using Ubiquitous Optical Sensing

We introduce a future lifestyle vision using interactive media technology based on ubiquitous optical sensing.

SUGIMOTO, Maki

Associate Professor,
Dept. of Information and Computer Science,
Faculty of Science and Technology

③ 15:40 - 16:10

Optoelectronic devices based on nanocarbon materials

We introduce (i) high-speed light emitters on silicon chips and (ii) single photon sources at room temperature and telecommunication wavelength for quantum cryptography, based on nanocarbon materials.

MAKI, Hideyuki

Associate Professor,
Dept. of Applied Physics and Physico-informatics,
Faculty of Science and Technology

④ 16:40 - 17:10

Cleaning and food processing based on the dynamics of ultrasound-induced bubbles

Gas bubbles can be nucleated in liquids and viscoelastic materials under ultrasound irradiation, as in carbonated beverages. We introduce cleaning and food processing based on the dynamics of acoustic bubbles.

ANDO, Keita

Assistant Professor,
Dept. of Mechanical Engineering,
Faculty of Science and Technology

For **Event Schedules**, please refer to the end.

*Please note that content, etc. of events or seminars are subject to change due to unavoidable circumstances on the day of the exhibit.

Outline of Exhibits

□ Special symbols used in the following exhibition descriptions

Technology involving patent rights held by Keio University. For further information, please inquire at the KLL Desk.

Technology Partnership Seminar; detail shown on Page 8.

Research Project at Keio Innovation Foundry (KIF) as one of Keio University Faculty of Science and Technology 75th Anniversary Commemorative Project. For further information, please see KIF web site.

Biomedical

Biomedical

BOOTH
1

The innovative arrhythmia therapy: PD ABLATION®

Professor **ARAI, Tsunenori**

Department of Applied Physics and Physico-informatics

We have proposed PD ABLATION® as an application of Photodynamic Therapy to an innovative arrhythmia treatment and developed a clinical device. The great interest has been focused in the heart rhythm societies of worldwide. We will show you the state-of-the-art technologies on PD ABLATION®.

Biomedical

BOOTH
2

Innovative laser probe technology for deep lesion

Professor **ARAI, Tsunenori**

Department of Applied Physics and Physico-informatics

To treat deep tumor lesion, we have focused on development of an ultra-thin laser probe less than 1.5 mm in diameter. We specially designed the probe to treat distal lung tumor and brain stem tumor. New technologies equipped on the probe will be shown.

Biomedical

BOOTH 3 Cure arteriosclerotic blood vessel surely: Vascular hyperthermia

Professor **ARAI, Tsunenori**
Department of Applied Physics and Physico-informatics

We have developed innovative vascular heating technology by means of laser-mediated-heat generation to treat ischemic disease. A dilatation as well as drug delivery characteristics were drastically improved. We have already experienced clinical cases. We will present the clinically available heating catheter and irrigating system.

Biomedical

Information and Communication

BOOTH 4 Wireless Health Monitoring

Professor **OTSUKI, Tomoaki**
Department of Information and Computer Science

We introduce wireless health monitoring techniques that can realize non-contact measurement of vital signals, such as heart beat, breathing, and blinking.

Biomedical

Information and Communication

BOOTH 5 Monitoring Using Radio Wave: Array Sensor

Professor **OTSUKI, Tomoaki**
Department of Information and Computer Science

We introduce an array sensor that can monitor a person using radio wave without invading privacy. Array sensor can classify activities and localize person.

Biomedical

Information and Communication

BOOTH 6 Monitoring Based on Temperature Distribution: Low-Resolution Infrared Sensor

Professor **OTSUKI, Tomoaki**
Department of Information and Computer Science

We introduce our monitoring system using a low-resolution infrared array sensor that can monitor a person based on temperature distribution without invading privacy.

Biomedical

Society & Environment

BOOTH 7 Investigation of the mechanisms of health effect caused by PM2.5 particles

Associate Professor **OKUDA, Tomoaki**
Department of Applied Chemistry

Recently, atmospheric aerosols such as PM2.5 are of serious concern for human health. Physical and chemical properties of aerosols are important as they provide metrics for their adverse health effects. Here I would like to introduce recent concept to elucidate these parameters using aerosol engineering techniques such as virtual impactor and cyclone system.

Biomedical

Society & Environment

BOOTH 60 Inkjet-Printed Chemical Sensors for Healthcare and Environmental Applications

Professor **CITTERIO, Daniel**
Department of Applied Chemistry

Inkjet printing technology commonly known from home-use inkjet printers has become a tool for industrial-scale mass fabrication. Our laboratory is making use of this technology in combination with paper substrates to develop low-cost, single-use and simple chemical sensors for clinical and environmental applications.

Information and Communication

Information and Communication

BOOTH 8 Polymer Optical Waveguide Devices Enabling ExaFLOPS Scale Computing

Associate Professor **ISHIGURE, Takaaki**
Department of Applied Physics and Physico-informatics

Optical interconnect technologies have been drawing much attention for realizing ExaFLOPS scale high-performance computing systems. In this research, polymer optical waveguide devices for high-bandwidth-density interconnects are designed and fabricated in order to demonstrate their outstanding performances.

Information and Communication

Electronics

BOOTH 9 PEACH: a switch to build a supercomputer with direct connection of GPUs

Professor **AMANO, Hideharu**
Department of Information and Computer Science

PEACH is a switching fabrics which build a supercomputer with a low latency direct communication between GPUs through PCIe.

Information and Communication

Society & Environment

BOOTH 10 Web eco-system by WIX (Web Index)

Associate Professor **TOYAMA, Motomichi**
Department of Information and Computer Science

Three main access paths to the Web are search engine, book mark and hyper-links. Each of these accompanies eco-system of information providers and consumers. WIX (Web Index) is meant to provide the fourth access path to the Web and we would like to exhibit the new eco-system based on WIX.

Information and Communication

BOOTH 11 Email + SQL = RMX

Associate Professor **TOYAMA, Motomichi**
Department of Information and Computer Science

We will demonstrate RMX system, which extends the syntax of Email address to cooperate with SQL to achieve higher functionalities.

Information and Communication

BOOTH 12 KANSEI MANGA Recommend

Associate Professor **MITSUKURA, Yasue**
Department of System Design Engineering

The evaluation of human emotions has been a multi-disciplinary area of research interest. Although there are several methods for such evaluation, such as subjective evaluation and behavioral taxonomy, direct evaluation from the human brain is more reliable. Electroencephalograph (EEG) signal analysis is particularly widely used because of its simplicity and convenience. In the site, we show the MANGA recommend system using the EEG.

Information and Communication

BOOTH
13

Scalable Control Technology for Large-scale Networks across Multi-carrier

Professor **YAMANAKA, Naoaki**
Department of Information and Computer Science

In the Software Defined Transport Network which makes carriers' large-scale networks dynamically manageable, a single management device controls all networks across multi-carrier. From the point of view of scalability, cooperation between management devices of each carrier is needed in the future. Therefore, we propose a secure cooperation method between management devices in the multi-carrier environment.

Information and Communication

BOOTH
14

HOLST: Energy-efficient datacenter network based on ultra high-speed optical switch

Professor **YAMANAKA, Naoaki**
Department of Information and Computer Science

Recently, datacenter network architecture using optical switches is studied to reduce the power consumption. On the conventional method, the number of traffic flows is limited due to the low switching speed of mechanical switches. Therefore, we propose a novel datacenter network architecture using ultra high-speed optical switches to increase the number of flows that are able to pass through optical lines.

Information and Communication

BOOTH
15

Atomic NFV for realization of super-distributed virtual network devices

Professor **YAMANAKA, Naoaki**
Department of Information and Computer Science

Network Function Virtualization (NFV) makes it possible to create communication services by using a virtualization of network node functions. We demonstrate "Atomic NFV" that realizes super-distributed virtual network devices.

Information and Communication

BOOTH
16

Low-cost and Energy-saving Optical Network by Programmable Optical Edge

Professor **YAMANAKA, Naoaki**
Department of Information and Computer Science

Conventional optical network requires multiple optical edges which implement dedicated communication processing function for each network service such as IP and Ethernet. In our research project, single programmable optical edge can accommodate multiple network services using reconfigurable communication processing modules composed of FPGA/LSI/CPU fabric.

Information and Communication

Biomedical

BOOTH
17

LMML: A Computational Forensic Visualization Environment

Professor **FUJISHIRO, Issei**
Department of Information and Computer Science

An integrated processing environment for a dedicated mark-up language, LMML, is introduced, which is intended to describe and visually analyze forensic big data towards the digitization of criminal investigation and court.

Information and Communication

Electronics

BOOTH
18

IoT environmental sensing system

Professor **MATSUMOTO, Yoshinori**
Department of Applied Physics and Physico-informatics

This booth exhibits IoT environmental sensing system which measures the weather, radiation or PM2.5 information using low power sensor and small solar cell. The data transmits through Wi-Fi or sensor network to collect or record by cloud system. IoT technologies visualize the data and analyze by tablet mobile device.

Information and Communication

Society & Environment

BOOTH
19

Interactive Intelligent System

Professor **IMAI, Michita**
Department of Information and Computer Science

Imai laboratory studies on Interactive Intelligence to achieve smooth Human machine interaction. We investigate the mechanism of human cognition and design and adaptive system based on the findings of the human cognition. We prepare an interactive robot, and an autonomous mobile wheelchair and explain our technical motivation in this exhibition.

Information and Communication

Electronics

BOOTH
20

Research and Development on Photonic Networks Using Broad Wavelength Range of T-band and O-band

Professor **TSUDA, Hiroyuki**
Assistant Professor **KUBO, Ryogo**
Department of Electronics and Electrical Engineering

Arrayed-waveguide grating routers for newly developing waveband (T-band, 1000-1260 nm) are fabricated. It realizes low-cost, ultra large capacity transmission systems for data center networks.

Information and Communication

BOOTH
21

Route guidance system in Intelligent Transportation Systems (ITS)

Professor **SHIGENO, Hiroshi**
Department of Information and Computer Science

We are researching vehicle-to-vehicle communication that vehicles communicate each other directly on the roads. For example, it is used for acquire the information such as accidents, traffic jam and so on faster and change the route. Moreover, we evaluate the application performance using network simulator and traffic simulator.

Information and Communication

BOOTH
22

Photonics polymer for ultra high-speed optical fiber and ultra high definition display

Professor **KOIKE, Yasuhiro**
Department of Applied Physics and Physico-informatics

4K/8K broadcast is scheduled to be started towards the Tokyo Olympics in 2020. We have developed the world's fastest plastic optical fiber that enables a real-time transmission of the staggering amount of information. Moreover, our photonics polymers bring innovation to the liquid crystal display structure which is getting bigger and more complicated.

Information and Communication

Society & Environment

BOOTH
23

PRINTEPS: a Total Intelligent Application Development Platform

Professor **YAMAGUCHI, Takahira**
Assistant Professor **MORITA, Takeshi**
Department of Administration Engineering

System development using general-purpose robots takes a lot of time. If the intelligent software is incorporated, cost (human, monetary, time) will be even higher. Therefore, in order to facilitate the development of the intelligent system using a robot, we perform research and development for building tools and intellectual software.

Information and Communication

BOOTH
24

Object Recognition / Augmented Visualization by 3D Image Sensing

Professor **SAITO, Hideo**
Department of Information and Computer Science

We present our recent research on 3D object recognition and augmented visualization by 3D image sensing, which is based on computer vision technologies for understanding scenes from images captured with cameras. A live visualization system for visualizing hidden scene will also be presented as a demonstration of the augmented visualization.

Information and Communication

BOOTH 25 Coexistence of real-time and IP communication in wide area LANAssociate Professor **YAKOH, Takahiro**
Department of System Design Engineering

This works aims at coexistence of real-time and IP communication in wide area LAN by synchronized TDMA. Periodic real-time communication occupies its communication path and transmission delay can be bounded. Additionally, throughput deterioration of IP communication is prevented by transmitting pause frame from switch.

Information and Communication

BOOTH 26 Optical Flow Estimation from a Single Image under Modulated LightingAssociate Professor **YAKOH, Takahiro**
Department of System Design Engineering

Modulated lighting during the exposure of a photography superimposes the temporal information in motion blurs. The following image processing well designed for the modulation can extract the optical flow velocity and even acceleration from a single image.

Information and Communication

BOOTH 27 ZINK on ZNA: Content Distribution Mechanism with Efficient Bandwidth Sharing on New Generation Network ArchitectureProfessor **TERAOKA, Fumio**
Assistant Professor **KANEKO, Kunitake**
Department of Information and Computer Science

We aim at realizing a content distribution mechanism called ZINK with efficient bandwidth sharing on a new generation network architecture called ZNA. ZINK enables content retrieval with location-independent content name for high content availability and enables in-network caching for efficient bandwidth sharing. ZNA provides ZINK with the following features: lower latency, broader bandwidth, and higher fault-tolerance than those in the current Internet.

Information and Communication

BOOTH 28 Open Data Oriented Network Management Infrastructure with Knowledge Base SystemProfessor **TERAOKA, Fumio**
Assistant Professor **KANEKO, Kunitake**
Department of Information and Computer Science

We develop KANVAS, which collects various network information and provides it as well-systemized open data. KANVAS realizes network management with network knowledge, such as network monitoring and inference of the cause of network failure.

Information and Communication

BOOTH 29 Next Generation Content ServiceAssistant Professor **KANEKO, Kunitake**
Professor **TERAOKA, Fumio**
Department of Information and Computer Science

In the future content service, we believe that the size and number of contents will grow much larger. We demonstrate two services for the future content service in this exhibition. 1. "MOON"-enables the distribution and rendering of high-resolution video over a network. 2. "Content Relationship Network"-enables to get the importance of content from the large number of relationships.

Information and Communication

BOOTH 30 Future data transfer platform for preventing affluent digital societyAssistant Professor **KANEKO, Kunitake**
Professor **TERAOKA, Fumio**
Department of Information and Computer Science

We need to handle data more delicately and highly, while developing of AI or appearance of IoT. Although we treated computing and networking separately, these will be integrated IT platform by next generation's IT platform so that users will focus on service.

Information and Communication

BOOTH 33 Dollhouse VR: An Asymmetric Collaborative System for Architectural-scale Space DesignResearch Associate **SUGIURA, Yuta**
Department of Information and Computer Science

We present a system that facilitates asymmetric collaboration among users with two different viewpoints in the design of living or working spaces, such as in the preparation of architectural schematics and floor plans. The system supports a pair of interaction techniques that facilitate communication between these two user viewpoints.

Information and Communication

Electronics

BOOTH 34 Wrap & Sense: Grasp Capture by a Band SensorResearch Associate **SUGIURA, Yuta**
Department of Information and Computer Science

We present a bare hand grasp observation system called Wrap & Sense. We built a piece of band sensing equipment composed of infrared distance sensors placed in a line. The sensor band is attached to a target object with all sensors directed along the object surface and detects the hand edge partially. Type of grasp (e.g., "power grasp") is used in combination with the 3D shape of the object to determine the whole hand posture.

Information and Communication

Electronics

BOOTH 35 A Measurement System of Body Expansion Using Spring and Photo Reflective SensorAssociate Professor **SUGIMOTO, Maki**
Research Associate **SUGIURA, Yuta**
Department of Information and Computer Science

We proposed a stretchable sensor for measurement of body expansion. This sensor consist of a photo reflective sensor and spring. The photo sensor is embedded in the spring. When the spring is not stretched, the emitted IR light will reflect back to the phototransistor. However, when the spring is stretched, some of the emitted IR light can flow out through the aperture of the spring, reducing the light reflecting back to the transistor. Therefore, the more the spring is stretched, the less the amount of light would be detected. This method allows user to construct a stretchable sensor that is simple, low-cost and customizable.

Information and Communication

Electronics

BOOTH 36 AffectiveWear: Smart Eyewear that can Recognize a Wearer's Facial Expressions in Daily LifeAssociate Professor **SUGIMOTO, Maki**
Research Associate **SUGIURA, Yuta**
Department of Information and Computer Science

AffectiveWear is a smart eyewear that can recognize a wearer's facial expressions in daily life. The eyewear can classify eight facial expressions using photo reflective sensors and machine learning method. AffectiveWear can help understand a wearer's mind. The information can be used for a marketing research and a support system for older adults.

Information and Communication

BOOTH 37 3D Gaze Detection for Collective Visual SensingAssociate Professor **SUGIMOTO, Maki**
Research Associate **SUGIURA, Yuta**
Department of Information and Computer Science

Collecting gaze information of multiple users can reveal the attention and intention among them. In this demonstration, we introduce a gaze detection and its 3D visualization technique using wearable camera devices.

Highly-sensitive magnetic field imaging using diamond

Associate Professor **HAYASE, Junko**
 Professor **ITO, Kohei**
 Department of Applied Physics and Physico-informatics

Wide-field imaging of weak magnetic field is demonstrated by using electrons in diamond as a magnetic field sensors. High sensitivity and high spatial resolution for measuring magnetic field can be achieved by utilizing quantum properties of electrons in diamond.

Electronics

Mechanics

BOOTH
43

Responsive Multithreaded Processor for Distributed Real-Time Systems

Professor **YAMASAKI, Nobuyuki**
 Department of Information and Computer Science

We show some cutting-edge embedded technologies such as Responsive Multithreaded Processor (RMTP) for parallel distributed real-time system applied like humanoid robot control, RMTP SoC, RMTP SiP and Responsive Link, which is a real-time communication standard.

Electronics

BOOTH
44

Highly Reliable Non-Contact Interface Using Transmission Line Couplers

Professor **KURODA, Tadahiro**
 Department of Electronics and Electrical Engineering

Our research demonstrates high-speed non-contact interface using transmission line coupler (TLC). Proximity communication with a wireless power supply provides immunity to mechanical damages caused by vibration/friction and isolation from water/chemicals while reducing fabrication costs. These features are suitable for medical and automotive applications where high reliability is demanded.

Electronics

BOOTH
45

Control system for welfare devices -Development of advanced prosthetic hand-

Research Associate **NOZAKI, Takahiro**
 Professor **MURAKAMI, Toshiyuki**
 Professor **OHNISHI, Kouhei**
 Department of System Design Engineering

We introduce an advanced prosthetic hand "general purpose artificial hand." This artificial hand substitutes physical sensation of healthy body part for that of lost body part. By the haptic transplant technology, human-like strong, dexterous, and adaptive motions are realized.

63

Wet process functional thin films

Professor **SHIRATORI, Seimei**
Department of Applied Physics and Physico-informatics

Anti-icing/Anti-frosting films, micro reactor (droplets movement control), antibacterial film, and repellent film for hot fluidic foods will be exhibited.

Materials

BOOTH
64

Repel and slip stains hardly adhere on surface: Anti-fouling coating

Professor **SHIRATORI, Seimei**
Department of Applied Physics and Physico-informatics

(1) Easy removal coating repels water for food or beverage and (2) Transparent coating slips oil for optical devices. This will reduce environmental problems and save energy. We promote the coating products to practical use.

Nano-Processing of New Materials

Professor **YAN, Jiwang**
Department of Mechanical Engineering

We develop new technologies for nano-scale processing and surface property control of materials in order to improve the functional capability and added value of industrial products. We deal with super hard alloys, ceramics, semiconductors, glass, diamond, CFRP, and so on. Recently, we have succeeded in high-efficiency generation of nanoparticles and 3D nanostructures by laser irradiation on waste silicon sludge.

Nondestructive inspection of internal anisotropy in polymeric materials by terahertz polarization spectroscopy

Associate Professor
WATANABE, Shinichi
Assistant Professor **OKANO, Makoto**
Department of Physics

Polymeric materials are usually opaque for visible light, but transparent for terahertz light. We demonstrate a polarization-sensitive terahertz spectroscopy which is very useful to investigate internal anisotropy inside polymeric materials.

68

High-performance Optical Device Fabrication

Professor **YAN, Jiwang**
Department of Mechanical Engineering

We develop new fabrication technologies for nano-precision free-form optics and their molds by using multi-axis numerical control ultraprecision machines. High-speed surface finishing of optical crystals, such as Si, Ge, ZnSe, CaF₂, etc. has been realized by ductile machining technology. Recently, we also succeeded in fabricating ultra-thin Si-HDPE hybrid lenses for future IR devices.

Fabrication Method for Ultra-fine Nano-catalysts by Gas-phase Intensive Nanocluster Source "Nanojima®"

Assistant Professor **TSUNOYAMA, Hironori**
Department of Chemistry

Nanoclusters composed of several to several thousand atoms show remarkable, size-specific catalytic performance. We have developed a fabrication method for ultra-fine metal nanocatalysts by utilizing intensive, size-selected nano cluster source "Nanojima®" (Ayabo Corp.) and non-destructive immobilization (soft-landing) method.

Development of Ultra-narrow Microfluidic Mixer for Chemical Synthesis of Fine Nanoclusters

Professor **NAKAJIMA, Atsushi**
Department of Chemistry

Nanoclusters exhibit remarkable functions dependent on their size. Liquid-phase, chemical synthesis method enables us to obtain gram-scale nanocluster materials. However, it is difficult to control the cluster size precisely. We have developed a novel microfluidic reactor with ultra-narrow reaction channels (Toshiba Machine Co. Ltd.) for the fine synthesis of nanoclusters.

Experience Design - Apply psychology to new products & services -

Associate Professor **NAKANISHI, Miwa**
Department of Administration Engineering

Our hand size is around 7 inches, and our capacity of short-term memory is 5 to 9 items. Just like these physical and cognitive characteristics, we humans have the common characteristics in the psychological aspect. Nakanishi-lab is developing methods to design new products and services that realize high-quality experiences for our life.

Other Fields

BOOTH
76

Dynamic Actuator

Associate Professor **KATSURA, Seiichiro**
Department of System Design Engineering

This technology attains fast and dynamic outputs by considering a mechanical structure of an actuator. It is possible to transmit the electric power to the mechanical power with high efficiency. Thus high speed, high torque, and high back drivability are attained. The dynamic actuator realizes performance improvement of a robot that is used in contact tasks.

Other Fields

Electronics

BOOTH
77

Thermo Film

Associate Professor **KATSURA, Seiichiro**
Department of System Design Engineering

"Thermo film" is a flexible device that can render thermal sensation based on thermal-electrical transformation. Since the device is thin and flexible, it is possible to change the structure. Thus the device will be applied to a wearable and cellular interfaces.

Applied Chemistry Group Exhibition Zone

Applied chemistry research committing to "health" and "beauty": molecules, materials, and system design

It is everyone's dream to lead a healthy life and stay beautiful. To realize this dream, we rely on new technologies in many fields, including medical care, pharmaceuticals, cosmetics, and dietary management. In this context, applied chemistry research contributes to a wide range of technological developments at various scales ranging from sub-nanometer-sized single molecules over molecularly assembled materials to larger systems. Exhibits and short presentations covering organic/inorganic, polymer/small molecule chemistry will be given by 6 research groups from the Department of Applied Chemistry. We are looking forward to your visit.

Short Presentations

- ① 10:30~11:00
- ② 14:30~14:50
- ③ 15:20~15:40
